AVOS staff guide

AVOS staff guide · Meadows Varkala

One page per desk. Everyone signs in at **https://app.shajianandan.com** with their email and password, on a phone or a computer. The first screen is always **My work**: what is on your desk right now, oldest first, with how long each item has waited and how long it may wait. Nothing on it is typed twice; it is what the books already know.

Three habits that make everything else work:

1. **Open My work when you start, after lunch and before you leave.** Clear it top to bottom.
2. **Record things when they happen, not at the end of the day.** A check-in, a payment, a bill, a payout.
3. **If something waits past its time, it moves up one desk** (sales → revenue, everyone else → owner) and that person is notified. The owner sees everything that slipped and for how long. Nobody is shouted at; the point is that nothing is lost.

Sales desk · Prachi

Your screens: My work, Leads, Inbox — bookings, Reservations, Availability, Guest IDs (to file Form C).

What is on your My work | Item | Allowed wait | What to do | |—|—|—| | Email from STAAH / SwiftBook waiting | 2 h | Open Inbox, press Book or Dismiss | | Enquiry unanswered | 1 h | Open Leads, Mark contacted, quote | | Form C to file (foreign guest) | 24 h from arrival | Open Guest IDs, file on the FRRO portal, record the number |

Leads

- New enquiries arrive on their own from NeoDove (Instagram, Facebook, WhatsApp, website). A phone or walk-in enquiry you add yourself with **+ Lead**: three taps and a name. Type the campaign if the guest says where they saw us.
- **Mark contacted** the moment you reply. The one-hour clock stops there.
- **Quote → WhatsApp**: tick the rooms, the price comes from the tariff card for those dates, and a ready WhatsApp message opens. The quote is valid 48 hours.
- **Hold** blocks the rooms for 48 hours while the guest decides. Expired holds release themselves.
- **Won** turns the lead into a booking. **Lost** needs a reason (dates, price, no reply, expired, other); that reason is how we learn what to fix.

Inbox — bookings

- STAAH reservations, cancellations and SwiftBook confirmations book themselves when everything lines up. The ones that wait show the reason on the card.
- The card shows the rooms with who holds them; free rooms of the right type are pre-ticked and the rate is filled in. Check the dates and press **Book**. Press **Re-read** if the email was fixed at the source.
- Website bookings from the STAAH booking engine ("(Confirmed) … Reservation No: …") arrive here too, as Direct. A "Villa" booking means the whole house: all four rooms go under one stay, with the total split per room-night. If one room is already taken for those dates the card waits and says so; move the other stay or pick by hand.
- If a card cannot be read, or the room type is one AVOS does not know, press **Book by hand in Reservations**: the booking form opens with whatever the email carried, you tap the room and save, and the card is marked done. Nothing is ever stuck on Dismiss or Re-read.

Reservations

- The screen opens on your bookings. Tap a guest's name, or anywhere on the row, to open the booking in a panel on the right; Esc or ✕ closes it and the list stays where it was.
- **+ New booking** (top right) opens the form in the same panel, in three steps: the stay (dates, adults, channel), the rooms, the guest. The total and **Save booking** stay at the bottom of the panel; if Save is grey, the line beside it says what is missing. Closing the panel keeps what you typed until you save.
- **Channel:** pick the channel, then, for Booking.com, Cleartrip and Expedia, answer **Who takes the guest's money?**: the OTA online, or the guest pays us at the property. Check the OTA email: "prepaid" or "channel collect" means the OTA.
- Rooms are tiles. Grey means taken, and the tile says by whom. Tap a free tile to add it at tariff; change the rate on the tile if agreed. The strip below shows room total, GST and gross, and whether the booking approves itself or goes to the revenue desk.
- On-tariff bookings approve themselves. Below tariff goes to Trupti; you will see "awaiting approval" and the booking is provisional until she decides.
- **Amend**: open the booking, press Amend, change rooms, dates, rate, guest or channel, and write a remark saying why. It is audited and the front desk is told. Use this for a room exchange or a wrong OTA mapping.

- Cancel needs a reason. Delete is only for your own unapproved bookings with no payment.
- **Record payment**: when a guest pays you an advance or the balance by UPI, bank transfer, card or Airpay link, open the booking and press **Record payment** under the balance. Type the amount (a part-payment is fine), pick how they paid and which bank it went into, the date it arrived, and the UPI/UTR reference if you have it. The balance updates at once and the revenue desk matches it to the bank alert. Cash is taken at the property only. You can void a payment you recorded by mistake from **Payments**; one recorded by another desk is voided by Trupti.

Form C (foreign guests)

- When the front desk marks a stay as foreign, “Form C to file” lands on your My work with 24 hours from arrival.
- Open it: the passport page, visa and arrival stamp are there. File on the FRRO portal, type the acknowledgement number into the box and press **Mark Form C filed**.

You cannot

Take cash, see money beyond a booking’s balance and what you recorded, edit an approved booking’s amount, see expenses or P&L. Bank alerts and Airpay receipts go to the revenue desk, not your Inbox, and OTA commission terms are not shown to sales.

Front desk and property · Sindhu

Your screens: My work, Front desk, Guest IDs, Payments, Guest invoices, Tasks, Expenses & petty cash, Availability. On the phone the **+** button at the bottom right captures an expense, a collection or a task in three taps.

What is on your My work | Item | Allowed wait | What to do | |—|—|—| | Arrival not checked in | by 18:00 | Front desk → Check in (or No-show) | | Departure with a balance | by 12:00 | Collect, then Check out | | Guest still checked in after check-out date | 1 h | Check out or tell sales to extend | | Checked-in stay with no ID proof | 2 h | Guest IDs → Take photo | | Open task | 24 h | Tasks → done | | Gateway receipt not matched to a stay | 24 h | Payments → confirm which stay |

Check-in

1. Front desk → the arrival's row → **ID proof** (lime). Mark Indian or Foreign national, pick the document, **Take photo**. One photo per document per guest; both sides if the address is on the back. Blurred? Remove and retake.
2. Back on Front desk → **Check in**. Do this when the guest arrives, even at night. A guest who never came is **No-show**.
3. Foreign guests: photograph passport page, visa page and arrival stamp. That is all; sales files Form C.

Payments

- **Collect at property** lists who owes money today with the balance filled in. Tap **Collect**, choose UPI, cash, card, Airpay link or bank, type the reference if there is one, done. The balance updates on the booking.
- OTA stays (Booking.com, Agoda, MakeMyTrip…) show "OTA collect — nothing to take". Do not collect from them.
- Airpay receipts arrive by email; if one is not matched to a stay it appears here to confirm.
- **Deposit cash / top up petty cash** is a transfer, not an expense.

Check-out

1. Front desk → **Check out**. If a balance is due the screen says so: Collect first, then **Issue invoice**. The invoice carries GST at the right slab and opens as a PDF.
2. A housekeeping task is created for each room automatically.

Expenses & petty cash

- Every petty bill: **+** → Expense → amount → category → photo of the bill. Capture first; vendor and bill number can be filled later from the photo.
- Pick the nearest category; "More…" has the full list. Marketing bills get a campaign name.
- You see what you record (bills, top-ups received, cash deposited), not the balance AVOS expects you to hold. Count the petty cash tin and the cash drawer at the end of each week and send the counts to the revenue desk; they compare them with the books. The petty cash book with its opening and closing balance is on the revenue desk's and owner's screen.
- Bank-paid bills (electricity, subscriptions, fees) are the owner's to record, not yours.

Tasks

- **Kitchen equipment:** press **+** → **Task**, choose **Kitchen**, then the machine (Microwave, Oven, Fridge, Washing Machine, Water Purifier), what needs doing and a note. On the Tasks screen, **Add note**

keeps a dated log on the task: what was found, who came, parts ordered. The owner adds areas and equipment under Settings → Areas & equipment.

- Housekeeping, maintenance and anything else with a room or area, a title and a due date. Mark **done** with a photo where it helps. A maintenance bill paid from petty cash can be attached at the same time.

You cannot

Change a booking’s rooms or rate (ask sales), record bank expenses, see P&L or settings. You do not see bank balances, account numbers, OTA payouts or gateway charges: Payments shows the cash you hold (cash in hand, petty cash) and the collections you recorded.

Revenue desk · Trupti

Your screens: My work, Approvals, OTA payouts, Smart Reconcile, Revenue overview, Marketing scorecard, plus Leads, Inbox, Reservations, Guest IDs, Payments and Guest invoices to see what the desks did. Change log for the audit trail.

What is on your My work | Item | Allowed wait | What to do | |—|—|—| | Approval pending (below tariff, refund, amendment) | 4 h | Approvals → Approve or Return with a note | | OTA payout not settled | 7 days after check-out | OTA payouts → tick the stays on the statement, settle | | Bank statement line unmatched | 7 days | Smart Reconcile → accept or match | | Bank alert AVOS could not post | 2 h | Inbox → check which bank it is for (account digits under Settings) | | Anything sales let slip past its time | raised to you | Deal with it or send it back |

Payments

- A guest's advance or balance can be recorded from the booking itself: **Reservations** → open the booking → **Record payment** (amount, how paid, which bank, date, reference). **Payments** in the menu does the same from the list of who owes money, and is where any payment can be voided.

Approvals

- Only exceptions reach you: a rate below tariff, a refund, an amendment that changes money. The card shows the reason and the amount. **Approve** or **Return** with a note. The booking stays provisional until you decide.
- Refunds you approve are then paid by the owner, who records the transfer.

OTA payouts

1. Pick the channel. **Stays awaiting payout** lists what has checked out and not been settled.
2. Tick the stays on the OTA's statement and press **Compute**. The formula is gross − commission − payment fee − TCS − TDS = expected, to the paisa, using the terms the owner set per channel.
3. Type the payout reference and date, and the amount received if it differs. **Draft settlement**, then **Settle**. Commission and fee are posted once as expenses, TCS and TDS as recoverable credits, and every stay is marked paid.
4. **Payouts land in** IDFC First by default. The three payouts from before AVOS (Agoda 24 Sep, MakeMyTrip 29 Sep, Booking.com 2 Oct) landed in Yes Bank: pick Yes Bank for those.
5. A wrong settlement: **Undo** with a reason removes every row it created.

Smart Reconcile

1. Choose **Statement of** (IDFC First or Yes Bank), paste the bank statement rows (date, description, debit, credit) and press **Match**.
2. Four tiers propose matches: reference, exact amount, fee-tolerant for gateway receipts, OTA subset. Nothing is written until you **Accept**. Aim for more than 80% matched automatically.
3. You reconcile credits. Debits (bank expenses, refunds) are the owner's or the CA's.
4. Lines for the Yes Bank → IDFC transfers made before AVOS tracked them: mark them noted, do not match them to anything.
5. IDFC's transaction alert emails arrive here on their own as statement lines, so most of the month is already proposed before you paste anything. An Airpay settlement is posted straight away (Airpay clearing → IDFC) and you get a notification; nothing to do.

Revenue overview and pre-close

- Revenue by channel, direct share, OTA clearing for the month.

- Before the CA locks a month, the **Pre-close** card lists the exceptions: unreconciled bank lines, part-paid stays, expenses missing bill details, pending approvals, unsettled OTA stays, uninvoiced direct stays, stays not checked out. Each one says what it means, names the first few stays or bills, and has a button that opens the screen where it is fixed. Items marked **must be fixed** (approvals waiting, guests still checked in after their stay, direct stays without an invoice) block the close; the rest can be carried. Fix them, or press **Carry the rest with a note**, then **Hand to the accountant**.

Marketing scorecard

- Leads by month and source, how fast sales answered, how many booked, revenue against marketing spend, cost per lead and per booking, by campaign. This is how the agency is measured.

You cannot

Record expenses, lock a month, change settings or see P&L.

Accountant · Shubham

Your screens: My work, Month close, GST filing sheet, Revenue overview, Guest invoices, Smart Reconcile (debits), Change log, Dashboard. You can read every financial register (payments, transfers between accounts, other income, OTA payouts, bank balances) but not record into them.

What is on your My work | Item | Allowed wait | What to do | |—|—|—| | Month still open | by the 5th | Month close → lock once the pre-close is clear | | GST not filed | by the 15th | GST filing sheet → file → mark filed |

Month close

The top of the screen shows the month's three steps (pre-close, lock, GST filed), who does each, and which one the month is on.

1. Revenue desk clears the pre-close checks and hands the month to you. You see the same checklist on Month close.
2. **Lock** the month. From then on nobody, including the owner, can post into it; a correction goes into the current month with a note.
3. The close pack (summary and registers as CSV: bookings, payments, expenses, other income, transfers between accounts, invoices, credit notes, bank lines, OTA settlements) is kept for the month and can be downloaded.

GST filing sheet

- Taxable value by slab (nil up to ₹1,000 per room-night, 5% up to ₹7,500, 18% above), output GST, TCS to accept from the OTAs, TDS for 26AS, credit notes and advances. Everything is computed from the books; nothing is typed in.
- **GST under reverse charge (RCM)**: Booking.com B.V. invoices its commission and payment charge from the Netherlands without GST and takes them out of the payout. The hotel pays 18% IGST on those charges itself (GSTR-3B table 3.1(d)). The sheet lists each Booking.com payout settled in the month with its charges and the IGST, in the month the payout was received. Input credit only as you confirm: rooms at the 5% slab carry none. The rate is a channel term under Settings (Channels · payout terms → GST under reverse charge %).
- The top row shows output GST payable, the taxable value and the filing status. Once the month is locked, **Mark filed** appears there; press it after filing.
- **Corrections in the month** counts records edited or voided after they were made; open the Change log to review them before filing.

Change log

- Every change in AVOS with who, when, before and after. Filter by month; 100 rows at a time.

You cannot

See guest ID documents, record payments or expenses, change bookings.

Owner · Shaji

Everything above, plus:

On your My work: whatever any desk let slip, and the slip report (what went overdue, who had it, how long). Finished stays whose ID documents are waiting to move to Drive.

Daily

- **Bank expenses**: every bank-paid bill with its NEFT or UPI reference, so it matches itself at reconciliation. Pick the bank it was paid from. Marketing bills get the campaign name.
- **Move money between accounts** for Yes Bank → IDFC or bank → cash. A transfer, never an expense.
- **Refunds approved by the revenue desk**: make the transfer, record it on Approvals with the reference.

Weekly

- **Dashboard**: operating result, expenses by category, cash position by account with the balance the bank last reported underneath (and whether it agrees), who does what.
- **Slip report** on My work: the conversation to have is about tolerances and staffing, not about individuals.

Monthly

- **Settings & users**: tariff cards for the season, channel commission terms, GST settings, the default bank, close Yes Bank once empty, users and passwords.
- Confirm the petty cash count with Sindhu and the bank balances against the statements.

One-time items still open

- Publish the Google app for the Drive ID archive before 27 October (Google Cloud → Audience → Publish app).
- Enter the Yes Bank → IDFC transfer amounts if they should be real transfer rows; otherwise mark their statement lines noted.
- Three pre-go-live OTA payouts for Trupti to record under Yes Bank.
